

Performance & Scale Goals

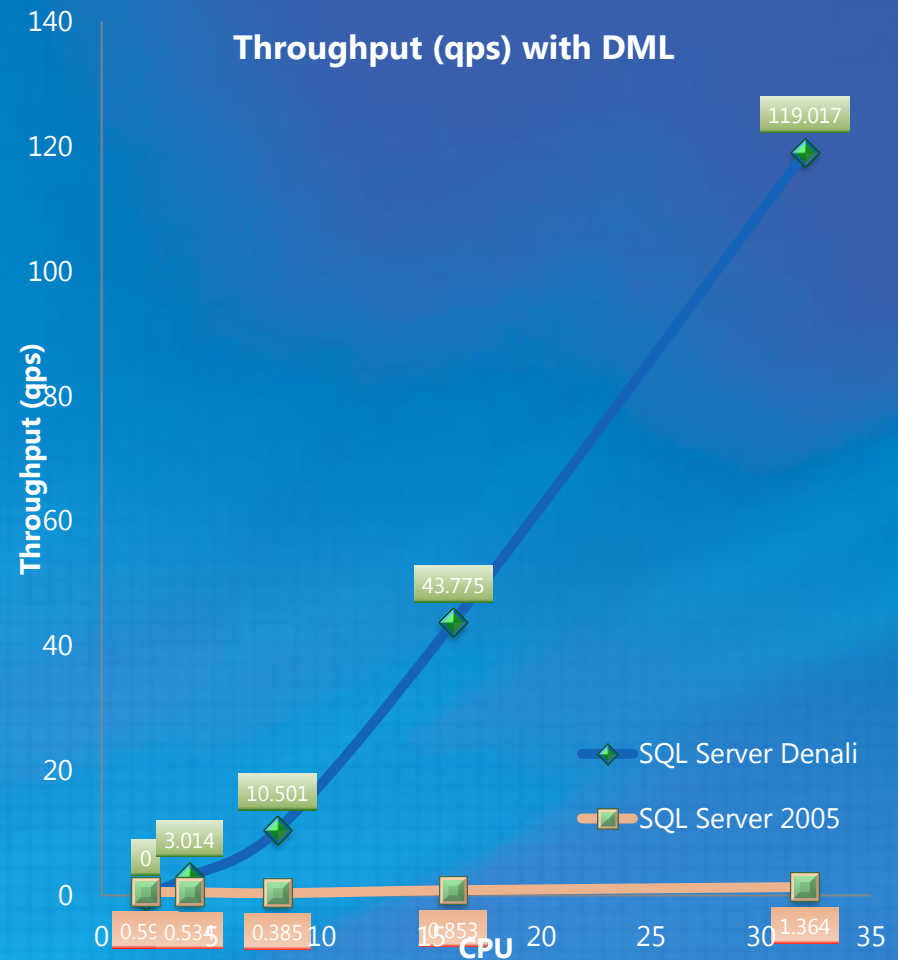

- Scale up to 350M documents
- Query magnitudes faster than 2008 release
- Worst-case Query response time < 3 sec
- At par or better than key DBMS players

Query Throughput on 350M Documents

Throughput (qps) without DML

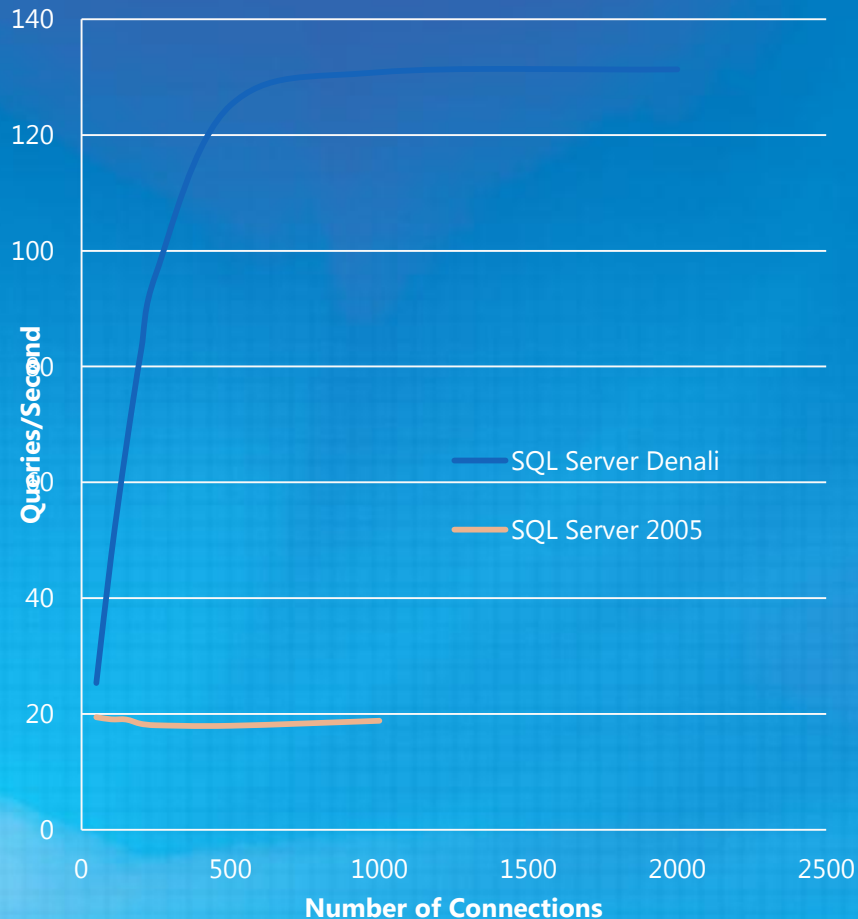

Throughput (qps) with DML

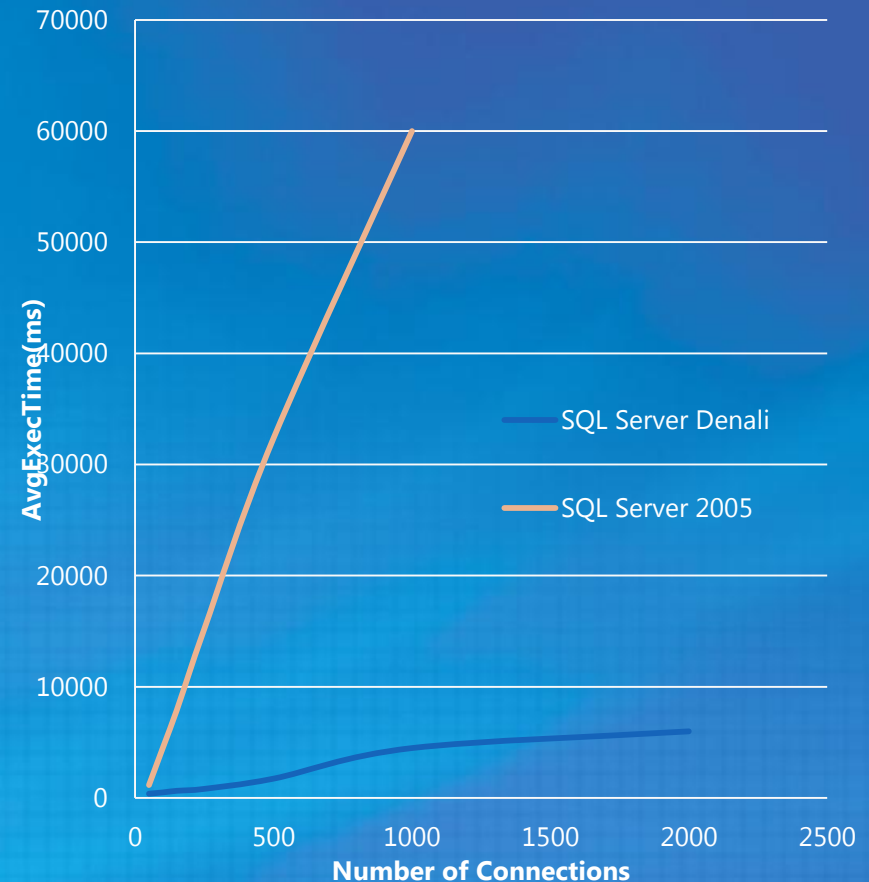

Throughput & Execution Time on a Customer Workload

Throughput/#Connections

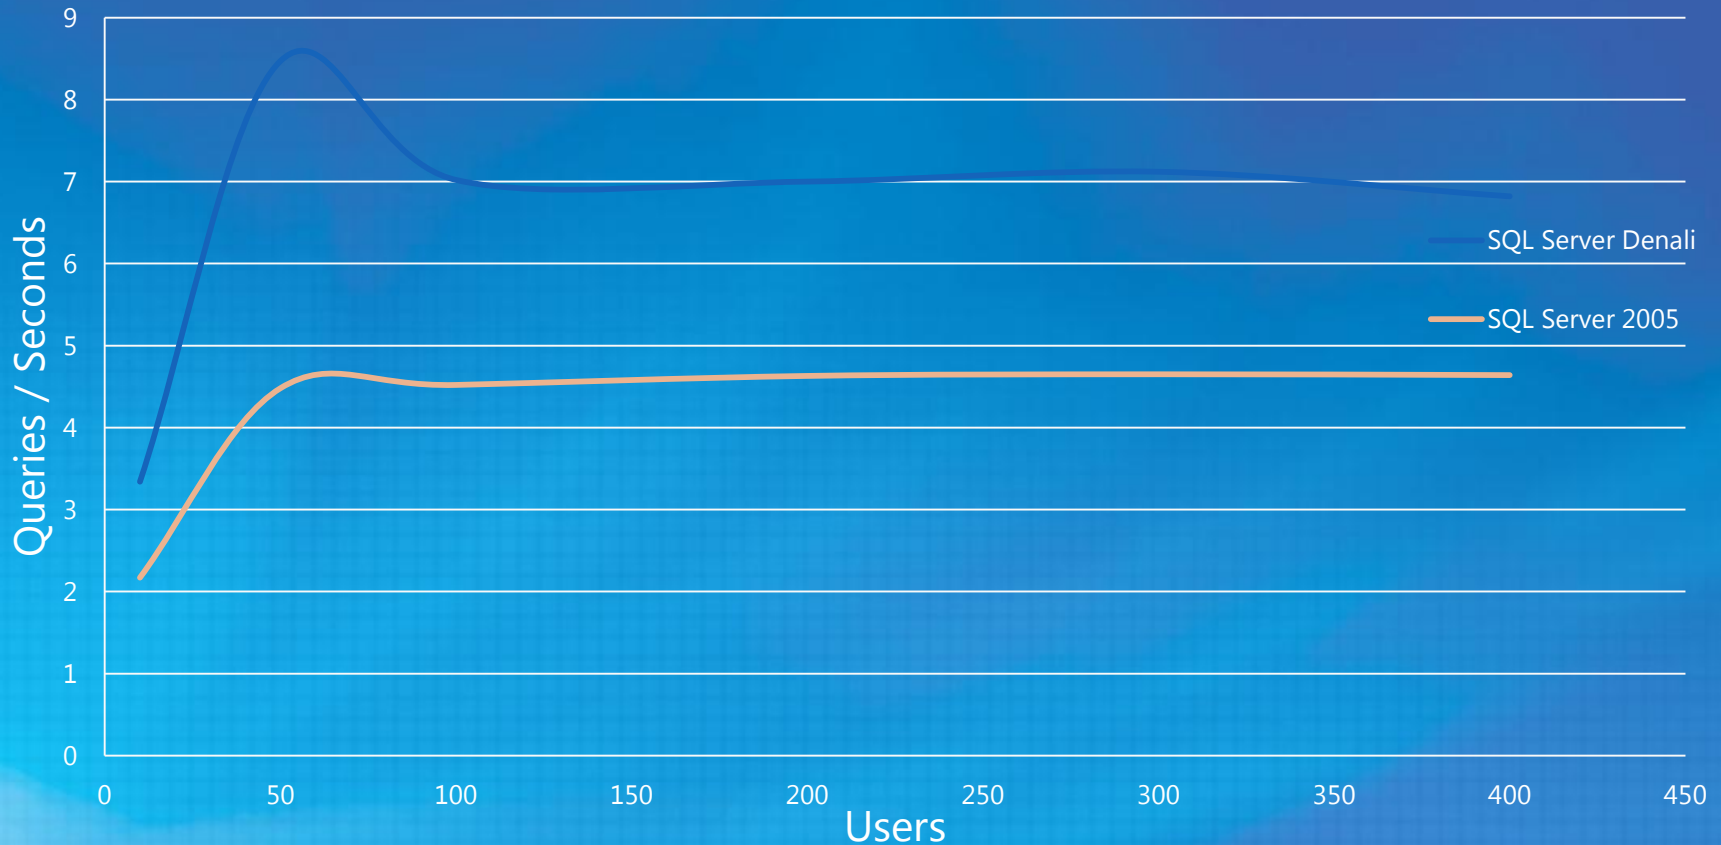

AvgExecTime (ms)/#connections

Query Throughput on another Customer Workload

Scaling Queries/Seconds

2X Query performance improvement compared with SQL Server 2005

Performance & Scale Summary

- Index and Query tested on scale up to 350 Million documents with < ~2 Sec Response
 - ~3X better w/o DML and ~9X better w DML throughput
 - Scale easily with increasing number of connections
- TAP customers already reporting significant performance improvement on their workloads
